

# Paper pals

Why wait for 2080 to have a robo-friend? Cut out, fold and paste this little robot together to bring it to life today!

## INSTRUCTIONS

1. Carefully cut out the robot parts with a pair of scissors.
2. Next, fold the paper inwards along the dotted lines.
3. Finally, go over the flaps that say "paste" with a stick of glue. Fold the different parts of the robot and stick them together.
4. Once all the parts have been made, it's time to put it all together. Glue the antennae to the head, and then the arms and legs to the body. Glue the head to the body, and voilà – your robot is ready to rumble!

### TOP TIP

Each arm is made up of two parts. Glue them together so that it's double sided. The same goes for the antennae.
